# Future-proof towards your destination

Our software leads the way

One flexible state-of-the-art platform with logistics solutions for every branch

Efficient processes and a good control of margins define your competitive position. This in contrast to an expensive custom-made software solution. Because a tailored solution might fit like a glove, but for how long? Adding changes afterwards can become very expensive, with the additional risk that you might be faced with the limits of your own customization. Choose 3PL Dynamics state-of-the-art platform: the future-proof solution for storage, transshipment and transportation of goods by land, sea and air.
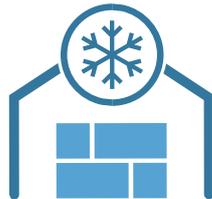

Sea freight **Air freight** **Road freight** **Warehousing**

Customs **Cold storage** **Groupage** **Expedition**

3PL Dynamics (third party logistics)
The dynamic world of logistics has numerous unique service providers. By contrast, they must deal with little distinctive, sector own processes. Not differences but similarities therefore underlie the versatile software platform of 3PL Dynamics. Together with the logistics branch, we continuously build on the branch standard: a modular solution where you decide what you want to use. Functionalities are developed and shared branch wide. Because all our customers work on the same version, we can automate updates. This allows the software to be always up to date, even years after implementation. Without time and effort on your part.

WMS

Your partner for
3PL Dynamics

Your challenge

The developments in (information) technology are going faster and faster. Giving companies in logistics a double challenge. Process optimization is a hard necessity and IT solutions have become the beating heart of the operation. But the more applications become critical for business processes, the more risky and costly development becomes. This makes keeping up with IT an opportunity and a trap at the same time.

Based on the knowledge and experience of other logistics service providers that are trying to reinvent the wheel on their own, we have partnered with a reputable Dutch company Boltrics to bring to market, their standard 3PL Dynamics solutions offerings for the logistics industry. As a modern, internationally operating and certified ERP and CRM partner, we can help you simplify, automate and streamline your internal processes, easily guide you through the implementation of appropriate products to be applied to the latest trends in

Modern application technology and help you with digital transformation and cloud-based solutions. For 30years, we have been helping to improve our customers' business results in the Czech and Slovak republics, as well as with customers in many Countries in Europe, South Africa and the USA.

Stronger together

Your organization can also benefit from the branch

and more powerful tool in favor of all users. At conditions more favorable than expensive and perishable custom-made software. We would be pleased to show you the added value of our state of-the-art solution. We invite you to contact us for a personal introduction, which will be anything but standard.
